

To realise the potential of young researchers and offshore renewable energy.

International Network on Offshore Renewable Energy

Our Mission

Meeting people is essential, interacting with them is crucial. INORE creates arenas where the beginnings of collaboration can be made. INORE is made by, for and with PhD students and Post Docs working on all of the issues related to Offshore Renewable Energy (e.g offshore wind, wave ,tidal energy).

The overall target is to create and sustain a truly international, interdisciplinary and active network of young researchers who work on issues related to offshore renewable energy to enhance its development by creating opportunities for early stage researchers to meet each other. INORE strives to have members from all continents and relevant technologies, all working towards getting offshore renewable energy one step closer to reality.

Our Actions

INORE has three main arenas to facilitate our mission.

Continuous - our Website and Forum

INORE wishes to communicate with the entire marine-renewable sector; all early-stage researchers working on issues related to offshore renewable energy may register to become an INOREan. The website is fully driven by the members who can all add news and events and update their profile.

Frequent - our Workshops

Our workshops tackle the key themes facing offshore renewable energy. Each year the themes develop with the industry. These have previously been held in nature related locations to set the theme for the day!

- **Workshops: EWTEC 07, ICOE 08**

Annual - our Symposium

This event helps the launch of future sustainable collaborative research between the different participants. It is not only an academic arena. To facilitate networking and learning, social activities and inspiring sessions with keynote speakers - Industry leaders, leading researchers or government representatives have been included.

- **Symposia: Trondheim 07, Edinburgh 08, Ghent 09.**

Our Vision

Our vision stems from the need to enhance both our members' research and the need for new renewable energy. These arenas fulfil our mission to provide an informal yet professional atmosphere for networking. Two of the cornerstones of the INORE ethos are transparency in organisation and inclusion of all opinion; these events enable that.

Acknowledgements!

INORE are deeply grateful to the Norwegian Centre For Renewable Energy (NTNU-SINTEF-IFE) who have been supporting INORE with administration and the website. We also thank Statkraft, UKERC and the University of Edinburgh. The help of all our sponsors has been essential in making events possible.
